

V.C.O.B.

Virtua Computers Offsite Backup

In today's economy, **information is key**. Whether it be personal financial data or a new sales presentation, data loss can be devastating. Sure, an external hard drive or tape drive is a good spot to keep a second copy of this information...**but what happens if one of those is ruined or fails?**

Virtua Computers has developed a **new product** that provides a backup of your data off-site over the internet. This means that if something were to happen to your computer and/or your current backup solution, your data would still be safe, and of course secure, in another location.

V.C.O.B. is...

- **Affordable**
- **Easy to use**
- **Compatible with Mac, Windows PC and Linux**
- **Completely Secure**
- **Effective for both home and business users**
